

Dominic Azonobi

London, UK | +447478505101 | Dcazonobi21@gmail.com | [Portfolio](#) | [LinkedIn](#)

Professional Summary

Data Analyst with a distinctive background as a co-founder, specializing in Strategic Alignment and transforming complex datasets into actionable business intelligence. Proficient in the full data lifecycle—from ETL Architecture and Feature Engineering to Predictive Modelling—utilizing a technical toolkit of Python, R, SQL, and Tableau. Executed a Customer Segmentation strategy that grew a luxury startup's audience by 330%. This career transition, funded through high-volume logistics work, honed a unique resilience and a commitment to continuous improvement.

Technical Skills

Data Preparation & Engineering: ETL Pipeline Design (Staging Tables), Data Wrangling (Pandas/Tidyverse), Missing Value Imputation, Normalisation & Scaling, Outlier Handling (Winsorization).

Statistical Modelling & Machine Learning: OLS Regression (VIF Analysis), K-Means Clustering, Time Series Decomposition, Hypothesis Testing (A/B Testing), Cross-Validation, Permutation Tests.

Programming & Databases: Python (Scikit-learn, Statsmodels), R (ggplot2, dplyr), SQL (Window Functions, CTEs, COALESCE), Automation Scripting.

BI & Visualisation: Tableau (LOD Expressions, Set Actions, Parameters), Power BI, Geospatial Mapping, Dashboard Design.

Business Intelligence: Stakeholder Mapping, Requirement Gathering, Data Storytelling, ROI Analysis, Scenario Planning.

Education

Data Analytics Career Accelerator

LSE (The London School of Economics) | Nov 2025 Grade: Distinction

Bachelor of Applied Science, Accounting & Finance and Economics

University of Kent | Jun 2024 Grade: 2.1

Applied Analytics Projects

1. NHS GP Appointment & Capacity Analysis | Time Series & Demand Forecasting

Objective: Analysed 30 months of NHS data to assess capacity and identify drivers of "Did Not Attend" (DNA) rates.

Key Actions & Outcomes:

- Orchestrated Data Wrangling pipelines in Python to harmonize disparate temporal datasets, using Imputation strategies for missing service categories.

- Conducted Time Series Decomposition to isolate seasonality, revealing peak demands of 30M appointments in November.
- Integrated external Signal Detection by analysing social media sentiment (Twitter) to contextualize system strain against public perception.

Tools: Python (Pandas, Seaborn), Time Series Analysis, Text Mining

2. European Football Team Scouting Dashboard | Advanced Tableau & BI

Objective: Built a decision-support tool for a €150M player acquisition strategy under strict budget caps.

Key Actions & Outcomes:

- Engineered a "5-Year Salary" variable and utilized LOD Expressions (FIXED) in Tableau to ensure accurate budget tracking independent of view filtering.
- Implemented Set Actions and dynamic Parameters to allow stakeholders to simulate recruitment scenarios ("What-If Analysis") in real-time.
- Validated budget feasibility, enabling the precise allocation of resources to high-potential, non-star talent.

Tools: Tableau (LODs, Sets), SQL, Business Intelligence

3. Iowa Liquor Sales Market Expansion | ETL & Geospatial Analysis

Objective: Identified high-value targets for a new distribution centre using historical sales data.

Key Actions & Outcomes:

- Designed a robust SQL ingestion strategy using Staging Tables to handle data type mismatches before casting fields for analysis.
- Utilized Window Functions and Aggregations to calculate "Sales Per Capita", revealing that smaller counties (e.g., Dickinson) outperformed metros in efficiency.
- Uncovered a "Scotch Anomaly" in Johnson County (3x average sales) via Diagnostic Analytics, directly informing inventory allocation.

Tools: SQL (PostgreSQL), ETL Architecture, Geospatial Analysis

4. Supermarket Purchase Behaviour (2Market) | Customer Profiling

Objective: Evaluated advertising channel effectiveness and purchasing demographics.

Key Actions & Outcomes:

- Performed Data Cleaning using SQL COALESCE and regex functions to handle nulls and standardize text data.
- Developed a Visual Narrative in Tableau (Heat Maps, Symbol Maps) that identified Spain as the top-spending region.
- Conducted Cohort Analysis to reveal that digital platforms drove the majority of conversions, while brochures significantly underperformed.

Tools: SQL, Tableau, Cohort Analysis

5. Customer Loyalty Prediction (Turtle Games) | Predictive Modelling

Objective: Predicted loyalty points and segmented customers to improve retention.

Key Actions & Outcomes:

- Built a Multiple Linear Regression (OLS) model in R (R^2 of 0.83), conducting VIF Analysis to confirm no multicollinearity between spending and income.
- Applied K-Means Clustering to segment customers into 5 distinct personas (e.g., "High-High VIPs"), driving a targeted 30/60/90-day marketing plan.
- Validated model assumptions using Residual Analysis (Q-Q plots) to ensure statistical reliability.

Tools: R (RStudio), Regression, Clustering, Statistical Testing

Professional Experience

Project Team Lead, Financial Analytics | *LSE Employer Project (VP Analytics)* | May 2025 – Nov 2025

- Architected a custom Python Backtesting Engine and ETL Pipeline to evaluate trading strategies for S&P 500 stocks.
- Implemented Winsorization (1%) to handle outliers and utilized Cross-Validation to prevent model overfitting.
- Developed a "Sniper" strategy utilizing Recursive Feature Elimination (RFE) that achieved a Sharpe Ratio of 1.53 and \$261k PnL.

AI Solutions Developer | *Weblixx - AI Marketing Agency* | 2024

- Developed Automation Scripts using Python to streamline customer reputation management.
- Enhanced client KPIs by deploying review-filtering tools that improved Google Business ratings and reduced appointment no-shows.

E-commerce & Social Analytics Lead | *Local Kettle Brothers UK* | Jun 2022 – Dec 2023

- Managed a WooCommerce platform, overseeing Data Collection and processing for high-ticket transactions (£50k+ revenue).
- Directed a content strategy grounded in A/B Testing, achieving a 330% growth in followers (15k to 65k) in 18 months.

Logistics Operative | *Amazon* | 2024 – Oct 2025

- Maintained 99% SLA adherence in a high-pressure environment, financing professional development in Data Analytics.
